2. Citations and explanations (Rule 70.7)

Reference is made to the following document which is written in international search report.

D1 : JP 5-84279 A(6 APR. 1993)

Novelty

Claim 1 of the present invention concerns a nursing bottle artificial nipple having a root portion, teat portion with a feeding hole, neck portion comprising: fiber nets(20) embedded within the thickness of the nipple body, and an air flow groove(15) formed in a porion of a surface of the nipple body.

The closest prior art is given by the document D1. This document discloses(cf. Fig. 1) a nursing bottle nipple comprising a teat part, bowl-like drum part and a connecting part.

While claim 1 of the present invention discloses fiber nets and an air flow groove, the most closest prior art D1 does not disclose said component of the present invention.

Thus, claim 1 is novel under Article 33(2).
As a consequence, dependent claims 2-4 are also novel.

(See the supplemental Box.)

Internal aplication No.

PCT/KR2002/002032

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of:

Box No.V

2. Inventive Step

Claim 1 of the present invention is intended to present a nursing nipple which has the durability not to be torn with a fatigue load and eliminates difficulty in breathing by facilitating the flow of air. The solution according to claim 1 is from fiber nets and an air flow groove which are equipped in the nipple.

D1 discloses a nursing bottle nipple comprising a teat part, a bowl-like drum part and a connecting part. D1 does not give any inference for the fiber nets and the air flow groove, and the solution in D1 is not obvious for a skilled person in the art.

Thus, the invention in claim 1 is inventive under 33(3) PCT. As a consequence, dependent claims 2-4 are also inventive.

3. Indutrial applicability

Claims 1-4 fulfil the requirement of Article 33(4) PCT.
